01

Find the customer questions

Capture real questions and turn them into prompts that support a commercial decision.

Keep the source and the question together

Start with customer evidence. Preserve the original wording, record where it came from and explain why the question matters to your business.

Brand and project owner

Priority product or service

Audience and customer need

Country and language

Target page or commercial objective

What does the customer need to decide?

Name the need, barrier, comparison or buying decision.

Work through four steps

1. **Collect**
   Find questions in customer conversations, reviews and public discussions.
2. **Classify**
   Group questions by the customer need and stage of the decision.
3. **Prioritise**
   Select questions with clear evidence and commercial relevance.
4. **Transfer**
   Move the selected prompts into your Prompt Framework.

02

Capture the evidence

Complete one record for each question and source. Use a theme ID to group related questions.

Research ID

Theme ID

Original question or customer wording

Source type

Date captured

Source URL or reference

Product, audience and customer need

What does this source tell you?

Record relevant context and any limits. Remove personal details from customer records.

Where to look

Sales calls, support questions, customer reviews, website search data, customer research, forums, Reddit and public questions can all reveal useful language.

Search suggestions can help identify questions to investigate. Check them against customer evidence. A discussion alone does not establish search demand.

03

Write a useful prompt

Keep the wording natural and include only constraints supported by the source.

Research ID or theme ID

Question type

Problem led, research, comparison or purchase

Proposed exact prompt

Commercial relevance

Which product, service or buying decision does this question relate to?

What evidence supports the wording?

Examples to guide your wording

Problem led

Customer concern: My feet hurt after a day sightseeing.
Prompt: What should I look for in walking shoes for long days sightseeing?

Comparison

Customer need: Lightweight shoes for a city break, with a £100 budget.
Prompt: Which lightweight walking shoes are suitable for a city break under £100?

Purchase

Customer decision: Whether Product A justifies a higher price.
Prompt: Is Product A worth the extra cost compared with Product B for daily walking?

These examples are illustrative. Validate your own questions before tracking them. Avoid wording that steers the answer towards your brand.

04

Choose what to track

Keep equivalent questions together. Preserve differences that change the customer decision.

Research ID or theme ID

Proposed framework prompt ID

Selected prompt

Priority

High, medium or low

Decision

Include, research further or exclude

Reason for the priority and decision

Consider the evidence, the buying decision and whether content or PR can address the need.

Evidence gaps or similar questions

Group equivalent questions under one theme. Keep materially different needs separate.

Owner and review date

Source reference

Transfer the selected questions

Copy the exact prompt, ID, product, customer need, question type, source and priority into your Prompt Framework. Agree the core or exploratory group before the baseline.

Your prompt set is a chosen sample of customer conversations. Record source gaps and selection bias, then review the set as customer needs change.
